

EARTH-ADMIN / MARS-LOCAL

CONTROL VS CARE

A speculative civic experience comparing proof-based approval with future-living preparedness.

EXPERIENCE DESIGN

UI / UX

PROTOTYPE

PROJECT OVERVIEW

One civic activity, redesigned through two different system logics.

Earth-Admin / Mars-Local compares two versions of the same entry-permission experience. Earth-Admin is built around proof, eligibility and formal approval. Mars-Local keeps an entry assessment, but shifts the experience toward projected living conditions, risk visibility and informed decision-making.

I developed the system logic, user journey, interface design and interactive prototype, then tested the full experience and revised key decision points.

ROLE

Experience design
UX / UI
Prototyping

TOOL

Figma
Interactive prototype

EARTH-ADMIN / FORMAL ENTRY APPLICATION

MARS-LOCAL / GUIDED ENTRY ASSESSMENT

ETHAN IS PREPARING TO LEAVE EARTH

The application is only the beginning; the real question is whether the plan is sustainable.

ETHAN

18 YEARS OLD

INTERNATIONAL STUDENT

He has finished high school and plans to study Graphic Design while working part-time to support rent, food, transport and daily living costs.

The decision affects more than entry status - it affects how independently he can live after arrival.

EARTH-ADMIN ASKS

Does Ethan meet the requirements?

Has he provided enough proof?

MARS-LOCAL ASKS

Can Ethan realistically live within these conditions?

Does he understand the risks?

CONTROL

Documents / evidence / compliance / formal approval

CARE

Context / projections / risk visibility / support / informed choice

TWO SYSTEMS. TWO FUTURES.

The same application changes meaning depending on where authority sits and what the system chooses to show.

EARTH-ADMIN

Proof before permission

- 01 Entry and conditions
- 02 Identity and eligibility
- 03 Required documents
- 04 Declaration and consent
- 05 System decision
- 06 Outcome and next step

MARS-LOCAL

Prepare before committing

- 01 Guided entry
- 02 Profile and current context
- 03 Future-living simulation
- 04 Risk and accountability
- 05 User decision
- 06 Support pathway

PROOF BEFORE PERMISSION

A formal, sequential flow where the applicant proves identity, eligibility and financial capacity.

The experience is document-heavy and compliance-led. Ethan provides evidence, confirms legal declarations and waits for the system to make the final decision.

01 / ENTRY + CONDITIONS

02 / REQUIRED EVIDENCE

03 / DECLARATION + CONSENT

IDENTITY

EVIDENCE

VERIFY

DECLARE

WAIT

OUTCOME

THE SYSTEM HOLDS THE FINAL AUTHORITY

After submission, the applicant receives a formal approval or refusal outcome.

APPROVED

NOT APPROVED

EARTH-ADMIN LOGIC

Submit proof -> system verifies -> system decides -> applicant receives outcome

The user follows the procedure; authority remains primarily institutional.

PREPARE BEFORE COMMITTING

A guided assessment that turns current circumstances into a simulation of future living conditions.

Mars-Local still collects personal context, but the purpose is different: the information is used to show Ethan what life may look like after arrival and where pressure may appear.

01 / GUIDED ENTRY

02 / CURRENT SITUATION

03 / HOUSING OUTLOOK

CONTEXT

HOUSING

COSTS

BALANCE

RISK

DECIDE

HOUSING + LIVING COSTS

The system translates personal context into concrete estimates before the applicant makes a decision.

HOUSING OUTLOOK

WHAT IT REVEALS

Rent, bond, setup costs, housing availability and the pressure these costs place on savings.

MONTHLY COST PROJECTION

WHAT IT REVEALS

Rent, food, transport, phone, utilities and emergency costs combined into a monthly estimate.

WORK / STUDY BALANCE + RISK

Preparedness is shown as a relationship between income, workload, housing pressure and emergency readiness.

WORK AND STUDY PROJECTION

BALANCE

Expected work hours and income are compared against study load and projected monthly costs.

POTENTIAL FUTURE RISKS

RISK VISIBILITY

Financial risk, housing risk, study pressure and emergency readiness become visible before commitment.

INFORMATION BECOMES ACTION

Mars-Local does not simply approve or reject Ethan; it asks him to choose a pathway after reviewing the projections.

Your Decision

You have reviewed your projected circumstances, financial outlook, and potential challenges. Mars-Local has provided information and context to help you understand your situation.

Based on your risk projection

Financial Risk

Medium-High

Housing Risk

Medium

Study Pressure

Medium

Emergency Risk

High

Mars-Local recommends reviewing support options before making a final decision.

Before You Continue

Based on your current circumstances, you may experience financial pressure, housing uncertainty, and reduced emergency resilience during your first months of settlement. These outcomes are projections, not guarantees. Mars-Local cannot predict your future, but it can help you understand possible consequences before making a commitment.

☐ Proceed With Entry

DECISION SCREEN

Decision Recorded

Proceed With Entry

Your decision has been recorded.

You have chosen to continue based on the information provided throughout this assessment. Support services remain available if your circumstances change in the future.

Understanding Your Decision

Based on the assessment completed today, you have chosen to proceed despite several identified challenges. Current assessment indicates:

- Financial Risk: Medium-High
- Emergency Buffer Risk: High
- Housing Stability: Medium
- Study Pressure: Medium

These risks do not prevent entry, but they may affect your settlement experience during the first months of arrival.

Next Journey

DECISION RECORDED

PROCEED

PAUSE

REVISE

SEEK SUPPORT

AGENCY

The participant confirms understanding of the risks, then chooses what happens next.

HOW THE EXPERIENCE CHANGES

The contrast is not only visual; it changes what information matters, how risk is framed and who makes the final decision.

SYSTEM DIMENSION	EARTH-ADMIN	MARS-LOCAL
ENTRY LOGIC	Proof and eligibility	Preparedness and context
INFORMATION	Documents, identity, finance	Savings, housing, work and support context
RISK	Compliance failure, delay, refusal	Future-living pressure and readiness
AUTHORITY	System makes the final decision	Participant chooses after reviewing projections
TONE	Formal, rigid, document-based	Explanatory, reflective, supportive
OUTCOME	Accepted / rejected	Proceed / pause / revise / seek support

TWO INTERFACES, TWO ATTITUDES

The interface language reinforces the difference between institutional control and future-oriented guidance.

EARTH-ADMIN

Formal / procedural / evidence-led

COLOR

Deep navy
Electric blue

UI

Forms
Warnings

TONE

Official
Authoritative

The visual language supports a system that asks for proof, verification and compliance.

MARS-LOCAL

Warm / contextual / projection-led

COLOR

Burnt orange
Warm amber

UI

Dashboards
Projections

TONE

Guided
Reflective

The interface shifts attention from submitting evidence to understanding future conditions.

FROM ROUGH FLOW TO INTERACTIVE PROTOTYPE

The interface grew out of hand-drawn flow mapping, screen hierarchy and iterative prototyping.

I first mapped the sequence on paper to test where information, hesitation and decisions should occur. Those sketches became structured screens and then a linked Figma prototype.

EARLY FLOW SKETCHES

FULL-RUN FIGMA PROTOTYPE

FLOW MAPPING

-> WIREFRAMES

-> PROTOTYPE

DEVELOPMENT FOCUS

Keep the two system journeys distinct while making each decision point understandable.

TESTING CHANGED THE DECISION MOMENT

A full-run test revealed where the participant slowed down, reflected and needed clearer transitions.

EARTH-ADMIN

Approx. 10 min
Structured + document-heavy

MARS-LOCAL

Approx. 5 min
Fast early, slower at risk + decision

KEY OBSERVATION

The strongest hesitation occurred at the Risk Projection and Final Decision stages. That pause showed that projected conditions were prompting reflection rather than being read as a rejection.

BEFORE

RISK PROJECTION

->

FINAL DECISION

AFTER

RISK PROJECTION

->

ACCOUNTABILITY

->

FINAL DECISION

ITERATION

An accountability stage was added so the participant confirms understanding before acting. Decision options were also separated more clearly.

ONE ACTIVITY. TWO SYSTEM LOGICS.

EARTH-ADMIN

"Does Ethan meet the requirements?"

MARS-LOCAL

"Can Ethan realistically live within these conditions?"

WHAT I DESIGNED

01

A proof-based Earth-Admin journey with formal eligibility, evidence and system outcomes.

02

A Mars-Local journey that simulates housing, costs, work-study balance and future risk.

03

An interactive Figma prototype tested end-to-end and revised around risk, accountability and choice.
